STRONG MEN IN CHARGE

Atlanta Company Numbers a Great Many Prominent Men Among Directors.

generally agree that Utah and Nevada are on the road to prosperity in a mining way.

One firm which does a large whole-sale lumber business in this part of the west recorted on Friday that since February 15 it had sold approximately 5,000,000 feet of immeer to Utah ouvers, fully one-half of which was purchased by mining companies.

From the papers from the various mining camps of Utah and Nevada it is evident that there are fewer fille miners now than at any time in the past two years. Producers, especially copper interests, are increasing their forces continually and there is no indication that they will attempt anything but an unusual production on the present satisfactory copper metal market. Zinc mine owners have the best market for years for their output, the price of the metal being high and the facilities for dispersing of their ores ideal.

Lead production is not being liabled materially despite the efforts of congress to reduce the tariff to below the starvation point. There is confidence in the situation, the tariff is not likely to be disturbed, and with this one factor settled satisfactorily the price of lead will return to something more like its average for a year or two past Silver holds remarkably well, and the average production from the average Utah mine is bringing the bost returns in several years. Nev. X18-foot shaft of the Goldfield Merger nes company has reached a depth of 900 feet and at the present rate of sinking is making about five feet daily, or between 140 and 150 feet per month. The ground through which the hig shaft has been sunk thus far has been firm and favorable for sinking. Unless the Its course it is probable that no lateral work, drifting or crosscutting will be started until the shaft shall have athas been reached.

The St. Ives claim of the Merger Mines. The St. Ives claim of the Merger Mines company, on which this shaft is being sunk, is traversed by several strong yeins and it would occasion no surprise if the shaft were to penetrate an ore body of large dimensions and paying grade at any time. Already two strong bodies of quartz have been passed through by the shaft, above the 600-foot level, but no work has been done in these veine, as it would have caused some interruntion in sinking, and it is the desire of the management to gain depth with all possible expedition and determine the value of the ore bodies on deener levels than any vet worked in the district while exploring a large area of ground.

machinery Is Delayed.

Four machine drills are being used in the sinking of this shaft and with the sinking of this shaft and with the said of the air compressor constantly renewing the supply of fresh air, it has been possible to work three shifts of men. This accounts for the rapid progress made in sinking, and with the installation of the remaining portions of the surface plant, including the 200-intermittent-horsenower electric hoisting cugine, which has been eleaved in transit owing to the floods that have held by freight traffic, the progress made in sinking will be materially increased as that the big bore should reach a depth of 1200 feet before the end of June.

No development shall have started and gained some headway. When the control of the Merger Company was acquired by the Goldfield Deep Mines company, the 116,000,000 corporation organized by associates of former. Senator William A. Clark of Montana and headed by his brother, a working fund of \$3,00,000 was provided and cash to that amount was placed in the treasury of the Merger company, the 116,000,000 corporation organized by associates of former. Senator William A. Clark of Montana and headed by his brother, a working fund of \$3,00,000 was provided and cash to that amount was placed in the treasury of the Merger company, the 116,00,000 corporation organized by associates of former. Senator William A. Clark of Montana and headed by his brother, a working fund of \$3,00,000 was provided and cash to that amount was placed in the treasury of the Merger company for development which he and his associates stood ready to provide another guarter of a million for the development of this ground in the event that further funds were required for this numbers.

The meeting of the Atlanta Mines company and the development of this ground in the event that further funds were required for this numbers.

### Strong Atlanta Interests.

The meeting of the Atlanta Mines company, called recently to take place at Princents, Arin, was postroned until May 8, owing to the enforced absence of some of the meeting in the company. At the meeting in May a new board of directors and new officers will be chosen, and according to an official announcement made recently, the new directors will make public their plans for the develonment of the Atlanta property.

The men interested in the reorganization and development of the Atlanta are among the most prominent and wealthy mining men in the courty, including former Scater Thomas Kearns of Utah, Civile A. Heller, president of the Tonomah Belmont and other leading Tonorah companies; C. R. Zabriskie, an associate and representative of F. M. (Borax) Smith, and George Wingfield, president of the Goldfield Consolidated Mines companies; The usual degree of reticence has been and contained the contained of the Goldfield Consolidated Mines companies.

Smith, and George Wingfield, president of the Goldfield Consolidated Mines company.

The usual degree of reticence has been observed by all of these men and their representatives regarding the deal and the plans for developing the property, but they have admitted sufficient in interviews to warrant the assertion that they will be tucluded in the personnel of the new company, and it is said to be practically settled that George Wingfield will be president of the corporation and that the management of the property will be left largely in his lands and those of his engineering staff.

Plan of Developments.

There seems to be little doubt that the first work to be done by the new management with the former company, and it copen deep working from the deep level to connect with shafts on the Atlanta that are already from 500 to 720 feet deep. This would afford ventilation for the Consolidated workings an essential factor in deep mining, as well as for the Atlanta workings, and the Atlanta shafts could then be sunk to greater depth with comparative case.

By this method of opening up the Atlanta ground, almost the Atlanta shafts could be effected, as there is a wide difference between the cost of sinking and raising, the latter often entailing less than one-half the cost of the former. While a considerable amount of development work has been done on Atlanta ground, almost altogether by lessence, there has been done on Atlanta ground, almost altogether by lessence, there has been done on Atlanta ground, almost altogether by lessence, there has been done on Atlanta ground, almost altogether by lessence, there has been done on Atlanta ground and mining men generally have unbounded faith in this territory and helieve it will only require the opening of the ground at a depth of from Linded Tin. # CHIEF CON. HARD AT DEEP EFFORT

velopment Is on in Full Blast.

GOOD ORES SHOWING

April Likely to Result as Favorably as March Net Earnings.

President and General Manager Walter Fitch of the Chief Consolidated company that had not reached production stage a year ago.

Copper experts are agreed that 1912 will see a considerable gain in output, though there is variation in the estimates as to what this increase will be. The following estimates of new refined copper to come on the market this year—that is, copper in addition to the amount produced last year—are made by two of the best known men in the copper business:

	there were at least five important mines	gave many items of interest in regard to	1

THE significance of the Adler Collegian label means a great deal more than just a mere name. It represents clothes value that is accepted as standard, an expression of clothes style acknowledged authentic.

Behind the Adler Collegian label are many years experience. The finished product is a crystallization of the finest work of master clothes craftsmen, each contributing his best, from the time the garment is designed to the time the last stitch is completed. Prices range from \$15 to \$30.

### ATTENTION CALLED TO MARKET FACTORS

James A. Pollock & Co. bankers and brokers, turnish the following, received over their private wire yesterday after-

noon:

Logan & Bryan, New York,—Trading during today's session was dull and uninteresting, with professional operations contributing greatly toward the bulk of transactions. Quite a few specialities were strong, notably the Bethlehem Steel issues, which were rapidly absorbed with talk in circulation of a resumption in dividend payments on the preferred issue at an early date. In addition, the telephone stocks were well taken, and in the last bour short covering in other quarters caused as recovery.

ment.

The crop prospect is, of course, a matter worthy of serious consideration, but as far as the winter wheat territory is concerned it should be borne in mind that any early damage in that section can be repaired from the standpoint of railroad tonnage, by planting, at a later date of other cereals. tonnage, by planting, at a later date, of other cereals. We feel hopeful as to the outlook and

We feel hopeful as to the outlook and are merely calling attention to all the foregoing as being the principal disturbling influences, but with more sanity being in evidence in our political circles, and with the desire quite pronounced to adjust matters so that the improving tendencies in the trade and industry will not be retarded, it seems probable that any marked change for the better, that any marked change for the better, that is, in the nature of eliminating unfavorable factors, will be reflected by a resumption of activity and advancing prices in the stock market, though for a period the irregularity which has been noted during the past week may continue for quite a period.

Ore Shipments. The Utah Ore Sampling company on Friday released 3 care of ore from Utah camps and 1 each from California and Nevada camps.

Ore and Bullion. The ore and bullion report for Friday siven by McCornick & Co., was as follows: Ore received, \$25,000; bullion shipped, \$60,000; total, \$35,000

Dr. Ross Anderson announces that after April 15 he will be located at 322 Kearns building.

contributing greatly toward the bulk of transactions. Quite a few specialities were strong, notably the Bethlehem Steel issues, which were rapidly absorbed with talk in circulation of a resumption in dividend payments on the preferred issue at an early date. In addition, the telephone stocks were well taken, and in the last hour short covering in other quarters caused a recovery from early declines.

It is generally admitted that fundamentals are sound and that the improving tendencies noted in trade and industry should, in time, he reflected by an expansion of enterprise. However, the factors which have of late tended most to hold in check the constructive element are the Mexican affair, which, to say the least, is far from assuring and suggestive of complications if not handled properly; the labor demands, which in some instances do not appear to be in keeping.

least, is far from assuring and suggestive of complications if not handled properly; the labor demands, which in some instances do not appear to be in keeping with present earning capacity of some of the corporations on which demands have been made; and finally, but not of the least importance, the foreign political situation, that is, with regard to the Italian and Turkish friction, in which connection the important and strategic Dardanelles might prove to be a very disturbing factor if these two powers friction is not soon settled. It is talked again that financiers are much interested now in bringing about a peaceful settlement.

The crop prospect is, of course, a matter worthy of serious consideration, but as far as the winter wheat territory is as far as the winter wheat territory is conserved it should be borne in mind that
